--- SEE OFFICE ACTION ON THE FOLLOWING PAGES ---

The art unit designated for this application has changed. Applicant(s) are hereby informed that future correspondence should be directed to Art Unit 1655.

The following is a quotation of 35 U.S.C. § 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. § 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 C.F.R. § 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. § 102(f) or (g) prior art under 35 U.S.C. § 103(a).

Claims 1-10 are rejected under 35 U.S.C. § 103(a) as being unpatentable over Parker et al. (P/N 5,760,205).

Parker et al. describes several human mitochondrial segments wherein mutations were found, particularly in regions that are also present in the instant Table 1 listing in column 6, lines 35-38. Parker et al. also suggests and motivates the preparation and usage of hybridization probes to assay for such mutations in

column 6, lines 57-65. Parker et al. further motivates the cloning of sequencing of COX genes for determination of mutations in column 7, lines 8-22. This, combined with the identification of hot spots in such a gene for mutations gives a reasonable expectation of success in finding any mutations in these regions.

Thus, it would have been obvious to someone of ordinary skill in the art at the time of the instant invention to practice the instant invention because Parker et al. describes mitochondrial mutation regions and suggests and motivates the preparation of probes for assaying of such mutations as well as sequencing to find others that may be present thus giving a reasonable expectation of success to practice the instant invention.

Patent Numbers 5,565,523 and 5,840,493 are listed on the enclosed PTO Form 892 as being on interest.

No claim is allowed.

Papers related to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Group 1600 via the PTO Fax Center located in Crystal Mall 1.
